IN THE present-day search for documentary information relating to the early arts and crafts in New England, an important source is the contemporary newspaper, too often neglected because thorough search requires a considerable expenditure of time. Here may be found valuable evidence concerning the work of painters, engravers, and early craftsmen not to be discovered elsewhere:—the work of the artist, the announcement of the recently completed engraving, the advertisement of the silversmith and the cabinetmaker, the shopkeeper's description of his stock of burnt-china and earthenware received in the last ships from England and Holland, the list of household goods and furniture to be sold at public vendue, the clockmaker's advertisement of his stock, the amazing list of fabrics offered for sale in the shops—all this and much more lies buried in the files of the early newspapers. Much of the value of this material will be found to exist in the exact knowledge it supplies of the productions of the arts and crafts at a known date and from these facts may be drawn deductions of real value to the antiquary and the artist.

The earliest newspapers printed in New England contained few advertisements and it was not until after 1720 that they increased in number and became more varied in character. Within the scope of the subject matter selected for this volume, the existing files of the following newspapers have been closely scanned, viz.:—

Boston News-Letter,	1704-1776
Boston Gazette,	1720-1765
New England Courant,	1721-1725
New England Journal,	1726-1740
Boston Evening Post,	1740-1764

The following "gleanings" have been made at various times, as opportunity permitted, in the libraries of the Massachusetts Historical Society and the American Antiquarian Society, and to the

librarians of those societies grateful thanks are tendered for the many courtesies extended. Thanks are also extended to the Society for the Preservation of New England Antiquities and the Marine Research Society for the loan of engraved blocks and to the Essex Institute, the Robert C. Vose Galleries, Mr. Francis Hill Bigelow, Mrs. Harriette M. Forbes, Mr. John W. Farwell and Mr. Morgan B. Brainard for illustrative material. These "gleanings," of necessity, are disconnected and supply only a glimpse, now and then, of the matter-of-fact, every-day happenings and matters of general information which were well known at the time. As "gleanings" they are offered to the student and to the curious reader.

INTRODUCTION

IN ORDER to properly understand the disabilities under which the New England Puritans created, something should be said at the outset about the characteristics of the Puritans and especially something concerning their former environment and education; and as much has been written about their pilgrimage to a distant land in order to find new homes where they might worship God according to the dictates of their own consciences, in order to judge somewhat of their artistic temperament we should know something of their spirituality.

They were Englishmen, and when the first considerable emigration ceased about the year 1640, of the 25,000 settlers then living in the Colony, probably ninety-five per cent were small farmers or workmen engaged in the manual trades, together with many indentured servants who had come over under the terms of a contract whereby they were bonded to serve their masters for a term of years—usually five or seven. The remaining five per cent of the population was composed of those governing the Colony, the stockholders in the Company, so to speak; ministers enough to supply the spiritual needs of each town and settlement, however small; a few of social position and comparative wealth; one lawyer; and a sprinkling of shopkeepers and small merchants living in the seaport towns.

The founders of the colony in the Massachusetts Bay, and most of those who immediately followed them, were men who did not conform to the ritual and government of the Established Church in England. They were followers of John Calvin whose Geneva Bible was widely read in England and whose teachings had profoundly influenced English thought and manners. Calvin taught a great simplicity of life and a literal application of the teachings found in the Bible. In the Commonwealth that he set up in Geneva, the daily life and actions of its citizens were as closely guarded as if in a nursery for children. All frivolous amusements

were forbidden, a curfew was established, and all were constrained to save souls and to labor for material development. There was a minute supervision of dress and personal conduct and a literal construction of Bible mandates was carried so far that children were actually put to death for striking their parents.

Calvin's theology was based on the belief that all men were born sinners and since Adam's fall, by the will of God, predestined from birth to hell and everlasting torment, unless, happily, one of the elect and so foreordained to be saved. In this belief the Puritans found life endurable because they considered themselves of the elect and in cases of doubt the individual found comfortable assurance in the belief that although certain of his neighbors were going to hell he was one of the elect. It naturally followed that the imagination of the Puritans was concentrated on questions of religion.

The teachings of Calvin spread rapidly in England and among his followers there came about an austerity of religious life and a great simplicity in dress and manners. Pomp and ceremony in church ritual was anathema and the usual adornments of the church edifice—the stained glass windows, the sculptured decorations, the pictures upon the walls, and even the monuments and brasses over the dead—became objects marked for destruction. During the reign of Queen Elizabeth there was much pulling down of shrines with their relics and of graven images in the churches that tended to adoration and superstition. Much painted glass having representations of Christ and the saints was also destroyed, leaving "religion naked, bare and unclad," to use the expression of a contemporary writer. But this was as nothing when compared with the violation of the churches by Puritan fanatics during the Commonwealth.

It is generally accepted that the Reformation was hostile or at least cold to the development of Art, and that sculpture, painting and architecture were but little regarded by the Protestant Church. This indifference blossomed into malignant destructiveness in the time of Cromwell and a Parliamentary Commission was appointed to go about England and destroy all "reliques of idolatry." At

the University of Cambridge they complained that the Commission went about "like a Bedlam breaking glasse windowes, having battered and beaten downe all our painted glasse, not only in our Chapples, but (contrary to order) in our publique scholes, Colledge Halls, Librayes and Chambers, mistaking perhaps the liberall Arts for Saints (which they intend in time to pull down to)."

In the county of Suffolk, a fanatic named William Dowsing was appointed in charge of this fascinating work. He kept a journal in which he minutely recorded, day by day, the destruction that attended his progress about the shire. At St. Peter's, Sudbury, he destroyed about one hundred pictures and gave orders to take down a cross on the steeple. At Haverhill, he records "we broke down about an hundred superstitious Pictures; and seven Fryars hugging a Nunn." At Ipswich, the godly Dowsing smashed his way through twelve churches. Two days were profitably spent there. At St. Margaret's, a churchwarden, "a godly man," promised to take down and destroy the twenty or thirty pictures. The recital might be continued at great length without adding to the impression desired to be conveyed, viz., the antagonism of the Puritans in England to all forms of adornment in their church edifices; and one should also look behind the veil at the mentality that conceived such destructive work.

The same is true of the meeting houses of the Puritans in New England, for a long time after the settlement. Both in exterior and interior nothing could be plainer and more lacking in decorative features. And a century later when the steeples of the meeting houses in the larger towns began to take on the architectural forms of the Wren churches built in London after the fire, even then the introduction of simple paneling and mouldings about a cornice or a pediment was as far as the housewrights permitted themselves to go in building house or meeting house. Mural decorations and painted glass in the windows did not begin to appear until another century had passed and Unitarianism had set theological groups by the ears and caused many of the older churches to break away from the severe Calvinistic doctrines.

It is true that most of the settlers of New England were poor in purse and with many of them mere existence was a struggle for a long time. But the growth of wealth in the Colony, although it brought with it more luxury in living and better dwellings, did not add much to the refinement of the people. It was the influence and example of the royal governors and a more frequent commercial intercourse with England and the Continental peoples that brought about a desire for a richer dress and an introduction of some of the refinements of life. This by no means met the approval of the Puritan ministers who frequently inveighed against "Professors of Religion who fashion themselves according to the World." The Rev. Cotton Mather, the leading minister in Boston and the industrious author of over four hundred published sermons and similar works, again and again exhorted against stage plays and infamous games of cards and dice. "It is a matter of Lamentation that even such things as these should be heard of in New England," he exclaimed. "And others spend their time in reading vain Romances," he continued. "It is meer loss of time." The analysis of the Puritan opposition to bear baiting, will be recalled, which they did away with, not because of the pain to the bear, but for the pleasure it gave to the audience.

With such a background and burdened with such a far-reaching antagonism toward the finer things of life, that help to lighten the burden of existence and beautify the way, it is small wonder that the esthetics found little fertile soil in New England, and much of this prejudice and state of mind lingered until our day among the old families in the more remote and orthodox communities. Little more than a generation ago the comfortably situated New England family sparingly decorated its parlor walls with floral wreaths made of human hair snipped from the heads of relatives and friends. It was a form of domestic art. One or two engravings representing the deathbed of Daniel Webster, or Washington in a martial attitude, might be seen and probably a framed representation of flowers painted on velvet or worked in cross-stitch. In some room there would be a framed motto worked in cross-stitch — "Simply to Thy cross I cling," "God bless our

Home," or a similar sentiment. The parlor furniture would be black walnut covered with black haircloth and on a marble-topped table might be seen the artistic yearnings of the family in the shape of a Rogers' group or possibly wax flowers under a glass bell. Hooked or braided rugs on the floors exemplified the thrift and handicraft of the women of the household. These rugs, made from wornout clothing, didn't come into fashion until about a century ago and most of them were made during the Godey's Magazine Period.

The art of wood engraving began in New England with a portrait of Rev. Richard Mather, the minister at Dorchester, Mass., which was cut in 1669 by John Foster, a young man of his parish. The print is about five by six inches in size, and the engraving was made on the flat side of a board as the longitudinal grain of the wood can be detected in the engraving. The block was in two pieces or split in the cutting as the head and shoulders do not fit together with the body by nearly a quarter of an inch.

Six years later, in 1675, Foster set up the first printing press in Boston, "over against the Sign of the Dove," and in 1677 he printed "A Narrative of the Troubles with the Indians," written by Rev. William Hubbard, the minister at Ipswich, and for this book Foster engraved a map—"the first that ever was here cut," it is stated in the title. Unlike the usual way of showing the cardinal points, the top represents the West, and the bottom represents the East. It was cut on wood and the title was set up in type and morticed into the engraved block.

Foster made an engraving on wood of the Colony Seal, the well-known Indian with a bow and arrow, which appeared on the title-page of "The General Laws" and several other books of the period and he also made a drawing of the town of Boston taken from Noddles Island, now East Boston, which was sent to Amsterdam in 1680 to be engraved. There is evidence to show that the engraving was made and impressions struck off but not a single example is known to exist. Foster, "the cunning Artist," was only thirty-three years old when he died and in the inventory of his estate are listed "carveing tools," and "his cuts and coolors." Nine

years later the printing office was burned and with it, probably, the tools of his handicraft and the blocks he had cut.

After the death of Foster the art of engraving seems to have languished in New England for a long time. Paper money, printed from rudely engraved copper plates done by John Coney, the Boston silversmith, was issued in 1690, and followed at different periods of stress by eight other issues, up to the time of the flood of paper money emitted at the time of the Revolution.

"A View of the Great Town of Boston" was proposed in 1722 by William Burgis who came from England to New York about 1718 and there published by subscription his "South East Prospect of the City of New York," an exceeding rare print. When he reached Boston he established himself at the Crown Coffee House, kept by Thomas Selby, and his first proposed "View of Boston" not receiving the support he hoped for, he drew a "Prospect" from the southeast and subscriptions were successfully solicited during the winter of 1723/4. The "Prospect" was engraved on three plates by John Harris, a London engraver, and measures $24\frac{1}{2}$ by $52\frac{1}{2}$ inches in size. It was advertised for sale by William Price, the Boston map and print seller, in Franklin's newspaper, the *New England Courant*, of Aug. 28, 1725. It shows twelve meeting houses and churches and fifteen shipyards and gives us the first American portrayal of a two-masted schooner, a form of vessel that originated in Gloucester in 1713. Boston, at that time, according to the legend under the "Prospect," had about 16,000 inhabitants.

Burgis produced several other views which were engraved and published including "A Prospect of the Colleges in Cambridge in New England"; a mezzotint view of Boston Light, showing an armed sloop; and a view of Castle William, with a fine representation of a ship of war in the foreground. All of these prints now exist in only a few examples.

Burgis married the widow of the tavern keeper where he lived and succeeded him as a "taverner," so he may be considered a Bostonian, but his training was wholly English and his plates were

THE BOSTON MASSACRE

From an engraving on copper made by Paul Revere in 1770,
after a drawing by Henry Pelham

all engraved in London, so his work cannot be properly said to be the product of New England culture.

A more typical example is the "Boston Massacre" engraved by the many-sided Paul Revere. The original drawing was made by Henry Pelham, the half-brother of John Singleton Copley, who engraved a plate from which prints were sold.

Jonathan Mulliken, a Yankee clock-maker of Newburyport, also engraved a plate closely following the Revere plate.

Revere has many engravings to his credit that exhibit excellent work for his time. His perspective was extraordinary and his line at times uncertain, but his portraits, views, caricatures, bookplates, psalm-tunes and bill heads, show sincere work and met a demand not easily supplied at that time.

Before him came James Turner, also a silversmith and engraver, who soon removed to Philadelphia; and Nathaniel Hurd, born in Boston in 1730, who engraved bill heads, bookplates, loan certificates, a portrait or two, and a curious caricature of Dr. Seth Hudson, a native of Lexington, who was convicted of forgery and ordered to the pillory. In the crowd of spectators Hurd introduced the likenesses of well-known Boston characters of the time. The culprit was not only pilloried, with an exposure to ancient eggs, garbage, and a choice assortment of missiles, but he also was tied to the whipping post and soundly thrashed and then fined and imprisoned. Puritan punishments when inflicted were dealt with a generous hand.

Allusion has been made to William Price, the Boston shopkeeper who sold prints. Before his time pictures of various kinds were sold generally at public vendue. In 1712, pictures were sold that had been found in the cargo of the ship *St. Francisco*, a prize brought into Boston for adjudication. In 1720, the *Boston Gazette* published an advertisement of a "Collection of choice Pictures, fit for any Gentleman's Dining-room or Stair-case" to be sold at vendue at the Crown Coffee-House on the Long Wharf. Two years later a French gentleman came to town who advertised to do all sorts of engraving at reasonable rates.

In 1726 there arrived in Boston, Peter Pelham of London, portrait painter and mezzotint engraver. His son Henry, born in Boston, in 1749, was an engraver and painted beautiful miniatures. He also practiced engineering which probably was a more dependable means of support. He eventually was drowned in Ireland while superintending some construction work.

Peter Pelham, soon after his arrival in Boston, painted a portrait of Rev. Cotton Mather, and after that reverend gentleman died in February, 1728, he engraved this portrait in mezzotint, the first work of the kind done in New England. The prints were ready in June and sold at five shillings each. Thereafter he painted and engraved the portraits of a dozen or more ministers and public men, which found a market among the ministers of the Colony and the well-to-do of their congregations. When the Rev. John Whiting of Concord died, among the furnishings of his house were prospects and mezzotint prints; "also the Effigies of all the New-England Ministers ever done in Metzotints, among which is the Effigy of that worthy Gentleman, the late Rev. William Welsteed, deceased," the latter done by John Singleton Copley when thirteen years old.

But Pelham's portraits and mezzotints could not keep his family alive and so he kept a private school afternoons. A few years later he also taught painting on glass and all sorts of needlework. "Youth may be Boarded or half Boarded"—reads the advertisement. In 1748 his "Writing and Arithmetick School" was kept open "from Candle Light 'till Nine in the Evening, for the benefit of those employ'd in Business all the Day." He also sold "best Virginia Tobacco, cut, spun into the very best Pigtail, and all other sorts; also snuff, at the cheapest Rates." But this was after he had married the widow Copley, the mother of John Singleton Copley. The widow had inherited from her first husband a tobacco shop and she continued to keep it open after his death.

Worst of all, in order to support himself and family, Peter Pelham was driven to the makeshift of opening a dancing school and advertising monthly assemblies. In a communication printed

REV. WILLIAM WELSTEED
From a mezzotint by John Singleton Copley

on the first page of the *Boston Gazette*, the next week after the announcement of the first assembly, a writer states that he has been startled and concerned at the birth of so formidable a monster in this part of the world, in a town famous for its decency and good order. He deplores the appearance of so licentious and expensive a diversion in which the great part of the pleasure consists in being gazed at and applauded. He invokes the interposition of public authority to prevent such expensive extravagance and closes with the following, "And if Madam and Miss are not suffered to shake their Heels Abroad, they will make the House and Family shake at Home."

The advertisements in the weekly Boston newspapers are an exact source for interesting information as to the artistic and decorative taste of the time.

In 1728, pictures painted with oil'd colours in carved frames, gilt, were advertised, together with a great variety of prints and maps, also picture varnishes, "which preserve them from the smোক and flies." There were metzotintoes to be had for painting on glass, in frames or without.

Maps were always in demand and were a favorite wall decoration. In 1756, Samuel Blodgett, near the sign of the Lamb, and opposite to Capt. Smith's, advertised Thomas Johnston's "Prospective Plan of the Battle fought near Lake George on the 8th of September 1755, between 2000 English with 250 Mohawks and 2500 French and Indians, in which the English were victorious." The print is in two sections and shows at the left a bird's-eye view of the march of the troops and at the right a view of the camp and the battle. The map shows the river and the forts.

Three years later Nathaniel Warner, at his shop near the Draw Bridge, had in stock a neat assortment of mezzotint pictures, such as, "the Hon. William Pitt. Esq., the King of Prussia, Mr. Gerrick, the actor; Mr. Beard, the singer; the twelve months, four seasons, four elements; the Rake's and Harlot's Progress; the idle and industrious apprentice; beautiful prospects, coloured and without; sea pieces, coloured; as also a neat assortment of Pictures painted on glass."

New England produced no portrait painter in oils, worthy of the name, until nearly a century had passed from the time of the settlement. Robert Feke came from abroad and appeared at Newport, R. I., about 1726. While in New England he painted a number of excellent portraits, several of which may be considered finer than any done by Smibert or Blackburn. He died in 1750 at the Barbadoes. John Smibert, a Scotchman, came to Rhode Island with Dean Berkeley, in 1728, and did most of his work in or about Boston. He married in Boston, in 1730, and like Pelham found it necessary to open a shop in order to increase a somewhat uncertain income from portrait painting. In 1734 he advertised "all Sorts of Colours, dry and ground, with Oils and Brushes, Frames of several sorts, the best Metzotints, Italian, French, Dutch and English Prints, in Frames and Glasses, or without, by Wholesale or Retail." The next spring he was forced to sell his private collection of prints which he had collected in Italy, France, Holland and England. "The Price of each single Print or Book to be mark'd upon 'em, and to be the same, which Mr. Smibert, who bought 'em at the best Hand, himself, gave for them," reads the advertisement in the *Boston News-Letter*. At the same time was sold a collection of pictures in oil colors.

Smibert's son Nathaniel, born in Boston, died in his 22d year. He followed in his father's steps, and his obituary states that "painting was his peculiar Profession." It also records that the young man "had no Relish for the Scenes of high Mirth and Gaiety, but chose those Pastimes which improved the Thought and left an agreeable Reflection," which, if true, makes it quite plain that he was foreordained for an early translation.

Another portrait painter from overseas was Joseph Blackburn, of whose origin and personality little is known. He seems to have reached New York in 1753, coming from Bermuda. In 1755 he was working in Boston and he remained there until 1763, when he strangely disappears. He could not have been well known in Boston a full year after he reached the town, as the postmaster then advertised in one of the local newspapers two letters that had been received addressed to him. Blackburn worked for a short

time at Portsmouth, N. H., and may have painted portraits at Newport. His subjects came from the mercantile aristocracy of New England, their wives and daughters, with a sprinkling of governors and judges and their "ladies." His work frequently suggests that of Copley and it is supposed that the younger man may have studied with Blackburn. The mystery of his appearance in New England and his strange disappearance remains a problem yet to be solved.

Nathaniel Emmons, a native of Boston, died there in 1740, aged 36 years. He painted the well-known portrait of Judge Sewall, the diarist and condemner of witches, and also several other portraits that have been identified with his name. The obituary published at his death states that "He was universally own'd to be the greatest Master of various Sorts of Painting that ever was born in this Country. And his Excellent Works were the pure Effects of his own Genius, without receiving any instructions from others. Some of his Pieces are such admirable Imitations of Nature, both in faces, Rivers, Banks and Rural scenes, that the Pleased Eye cannot easily leave them; and some of his Imitations of the Works of Art are so exquisite, that tho' we know they are only Paints, yet they deceive the sharpest Sight while it is nearly looking on them and will preserve his Memory till Age or some unhappy Accident or other destroy them. He was sober and modest and minded accuracy more than Profit."

John Smibert died in Boston in 1751, and about the time when he was obliged to decline commissions, through failing health, Joseph Badger, a house painter and glazier of Boston, turned his hand to painting portraits. He was the son of a Charlestown tailor, of small means, and his own children became glaziers and tailors. Badger's humble origin and comparative poverty undoubtedly prevented him from obtaining social recognition. His portraiture shows no great artistic excellence and suffers in comparison with that of Feke, Smibert and Blackburn. His portraits also display marked mannerisms in the posing of his subjects. His men were usually represented standing with the right hand resting on the hip, the two first fingers outstretched and holding

back the folds of the long-skirted coat of the period. His women were seated, one hand resting on the lap and sometimes holding a flower. Nearly thirty of his portraits represent children under fourteen years of age and while they express the primness of his time, they have a quaintness and naïve charm that is most appealing.

It is evident that Badger conscientiously aimed to produce a good likeness and allowance should be made for his evident lack of proper training and the non-existence in Boston of good paintings that he might study and hope to imitate for he lived in a Puritan town with an atmosphere not particularly congenial to art in any form. In 1757 he received £6 for painting the portrait of Timothy Orne, the Salem merchant, and five years later, when he was fifty-five years old, he painted five portraits for George Bray, a Boston baker, for which he received £12. To eke out a livelihood he painted signs and hatchments and, when nothing better turned up, he spread paint on the trim of houses. With the irony that Time inflicts, his work, until recently, has been attributed to other artists—Smibert, Blackburn or Copley—so that the man and his works have remained unknown.

John Singleton Copley, the first great American portrait painter, was born in Boston in 1737, from English parents who had arrived in the country only the year before so that it cannot be said that he very closely represents New England heredity or traditions. His father was in poor health and died in the West Indies about the time of his son's birth and the widow supported herself and son by the profits from a small tobacconist's shop. When the boy was about ten years old his mother married Peter Pelham, portrait painter, mizzotintest, school teacher and drawing master, and undoubtedly he received his first instruction in painting from his stepfather. When sixteen years old he was painting portraits and his skill and the number of his commissions increased with each succeeding year. He worked in pastel as well as oil and also painted miniatures. When thirty-two years old he made an advantageous marriage. At that time he was painting as many portraits as he could execute at prices ranging from five to

fourteen guineas each, and was in receipt of a comfortable income. The population of Boston at that time was about 18,000, which included a goodly number of well-to-do families of the merchant class, and also the members of the government, the justices of the courts and those engaged in the learned professions. It was the most important town in New England and represented its highest culture and social development.

Two years before Copley's marriage he had sent to Benjamin West, in London, a painting representing his half-brother, Henry Pelham, seated at a table, holding in his hand a chain to which a flying squirrel was attached. This picture is now known as the "Boy with the Squirrel." It was included in an exhibition of the predecessor of the Royal Academy, was warmly praised and his reputation in England was soon established. Copley was urged to remove to London; but such a step involved many risks and uncertainties. The three hundred guineas a year that he was earning in Boston must be increased to nine hundred in order to maintain an equal standard of living in London. But a desire to study the old masters and to improve his style persisted and the approach of the Revolution at last forced a decision. In 1774 he sailed for England where he received a cordial welcome and soon became the fashion. He never returned to America.

The building of houses was the first craft that was practiced by the Puritans after they landed in New England and for the larger number, at the outset, these were mere shelters. But the rude huts, tents, and wigwams were soon supplanted by wooden structures of the substantial character that the severe climate required. After the first imperative need for anything that furnished a shelter from the weather, the housewrights, who had been brought over to supply this anticipated want, proceeded to construct houses modelled along the lines of the structures with which they were familiar in their former homes in England. This was only natural. The apprentice system was in full swing in those days and a master taught his apprentices what he in turn had been taught by his master. The craft of building houses was passed along from one generation to another like the "mystery" of other crafts.

These housewrights, who landed at Plymouth, Salem, and Boston, as soon as they got their chests of tools ashore did not at once invent a new form of structure, framed and put together in a manner not known to them before. Oh, no! They proceeded to dig saw-pits and to saw up logs into timber and boards exactly as they had been taught to do in England through generations of apprenticeship.

The English housewrights, on reaching the Massachusetts Bay, found timber everywhere, to be had for the cutting, and wooden houses were commonly built, then as now. After the first need was met, larger and more substantial structures were erected with here and there a house of brick, usually in or near the seaport towns. A stone house north of Boston was almost unknown but in Rhode Island in parts of Connecticut, where a shaly rock was found, the stone house was the more usual thing.

As a typical example of the wooden house in the Massachusetts Bay and also elsewhere in New England during the last part of the seventeenth century, we may well take the Parson Capen house built in 1683, at Topsfield, Mass., which embodies several unusual decorative features, and the modern restoration of which was easily and accurately effected because comparatively few changes had been made in the original structure. The parson was a Harvard graduate and came to Topsfield from Dorchester. He married Priscilla Appleton of Ipswich, a town that adjoins Topsfield, and as the Appleton family were large land owners and rich, for the time, it is likely that young Priscilla was given a house as good as the countryside afforded.

It is a typical structure of its time with two large rooms on each floor and a huge central chimney. The second story overhangs the first, not for the purpose of permitting the parson to pour hot water on the heads of maurauding Indians, but because it was an architectural style and embellishment well known in England and naturally introduced on this side. This overhang disappears from New England houses soon after 1710 as the strength of the English structural tradition grew fainter. The pendants or "drops" under the overhang were further well-recognized embel-

ishments as were the less common brackets under the projecting garret floor and on either side of the front door. The nail-studded door perpetuated a medieval tradition and the leaded-glass casement windows existed everywhere at that time. "New-fashion" sliding window sash, in the London mode, were introduced about 1710, in the houses of the well-to-do living in the large towns.

Beyond a molding of the sheathing used to cover the walls of the house and a simple chamfering of the summer beams, no effort was made to decorate the interior with one exception—the newel post and balusters of the stair rail. The rooms were severely plain and well suited to the theology of their occupants. The inventories made at death do not reveal any pictures on the walls but there was good furniture, a clock and silver plate. The parson's predecessor in the ministerial office owned a golden cup.

This house may be fairly characterized as typical of the New England house of its period, but in the large towns there were a few fine houses in which lived wealthy merchants and their number increased in the early 1700's. In the Price "View of Boston," engraved in 1725, eight three-story houses appear and attention is called to them in the table beneath the picture. One of them was built about 1715 by William Clark, a wealthy merchant and member of the governor's council. His death in 1742 was attributed by some to the loss of forty sail of vessels in the French War. In this house afterwards lived Sir Henry Frankland, Collector of the Port, who fell in love with Agnes Surriage, the beautiful sixteen year old maid-of-all-work at the *Fountain Inn* in Marblehead. Her romantic story is well known. This house differed but little from the dozen or so of its type to be found in Boston at the time, save in its rich and elaborate decoration of the north parlor, at the right of the entrance hall. Here, the walls were divided into panels by fluted pilasters supporting an elaborate cornice, the whole heavily gilded, and each of the panels was embellished with a landscape or other decoration painted in oils. Painted arabesques and heraldic devices covered all other flat surfaces and the floor was laid in a mosaic of various

colored woods. Every inch of the surface of this parlor was the product of the imagination and skill of the painter, gilder or carver. But while this magnificence actually existed in New England, by no means was it typically representative of its culture or artistic development.

There was an important craft in New England that required much skill not only in construction but in wood carving, and that was ship building—a considerable industry practiced everywhere along the coast line from the early years following the settlement until the passing of the sailing ship in recent times. The oldest known ship model of a New England-built vessel is that of the “America,” built at Portsmouth, N. H., in 1749, and in this model may be seen evidence of the elaboration of carved wood decoration required about the bows and sterns of all of the larger vessels. The bow had its figurehead and head rails, with an elaboration of brackets and trail boards covered with carving or painted decoration and the stern carried its succession of galleries and quarter galleries, with many cabin windows surrounded by much carved and gilded work and between each deck-level a carved frieze frequently embellished with representations of sea nymphs, mermaids and tritons. On the King’s ships, a number of which were built on this side, the royal arms, with supporters, always appeared in the elaborate gingerbread-work about the stern. The woodwork in the ship’s cabins also carried much modelling and carving and it was only natural that the architectural skill they attained should eventually be utilized in house construction as wealth and occasion permitted. One excellent example of a development of this skill may be noted at a later day in the case of Samuel McIntire of Salem, a man who began his career as a wood carver in ship work and after a time transferred his technical skill and training in wood carving to the designing and decorating of houses.

Printing, the art preservative of arts, was set up early in the Massachusetts Bay Colony as an adjunct to the newly founded college in Cambridge. After printing the “Freeman’s Oath”—a small broadside—and an almanac for the year 1639, the “whole booke of Psalms” was turned into verse by “thirty pious and

learned Ministers,” with the Rev. Richard Mather at their head—he of the woodcut portrait and this was put into type and was the first book printed in New England, the well-known “Bay Psalm Book.” Previous to this the Puritans had used the version of the Psalms by Sternhold and Hopkins, which was not acceptable to the extremists who called it “Hopkins his Jiggies.”

How successful the thirty pious ministers were may be judged somewhat from the following lines:

“O Blessed man, that in th’ advice
Of wicked doeth not walk:
Nor stand in sinners way, nor sit
in charyre of scornfull folk

But in the law of Jehovah,
is his longing delight:
And in his law doth meditate,
by day and eke by night.”

During the late seventeenth century and well into the eighteenth, the books usually found in the average New England family were the Bible, the Psalm Book, an Almanac, the New England Primer, a sermon or two and perhaps a copy of Michael Wigglesworth’s terrific poem—“The Day of Doom.” The latter was first printed in 1662 in an edition of 1800 copies, not one of which has survived. Every copy was read and re-read until nothing remained but fragments of leaves. Seven editions of this poem were printed between 1662 and 1715 and few copies of any edition now exist. The book expressed the quintessence of Calvinism. Here is stanza 205, expressing the terror of those doomed to hell.

“They wring their hands, their caitiff-hands,
and gnash their teeth for terrour,
They cry, they roar, for anguish sore
and gnaw their tongues for horreur.

But get away without delay,
Christ pities not your cry:
Depart to Hell, there may you yell,
and roar Eternally.”

During the Colonial period both type and printing press came from abroad and there was little or no originality in type composition. Type faces became worn and continued in use and, moreover, much of the ink was poor so that the printed page frequently was muddy and sometimes almost unreadable. The freedom of the press was restricted and it was not until 1704 that a newspaper was permitted. Benjamin Franklin is considered by many as the first American printer who produced really fine work, but he removed from New England while a young man and located in Philadelphia.

When it comes to a consideration of the production of objects having to do with everyday life and material comfort, the New England craftsmen were not far behind their fellow workers overseas. The cabinetmakers, silversmiths, pewterers and ironworkers successfully continued the traditionary forms introduced from England and some of them, before long, evolved an individual style truly American.

Oak chests, in which to store clothing, were brought from England and also were made everywhere on this side; but it was a cabinetmaker at Hartford, Conn., who introduced individualistic decorative forms on his chests that gave them distinction among others of their type and made them prize examples for the private collector and the museum of today.

Farther up the Connecticut valley, in the town of Hadley, Mass., another cabinetmaker struck out for himself and made chests of a different type covered with an incised decoration heightened with color in a manner that certainly may be considered distinctive. His product could not have had a very wide distribution and the "Hadley chest" therefore must be considered a highly localized production.

Most of the early oak chests, court cupboards, tables, chairs and other pieces of furniture made in New England in the seventeenth century, so closely followed English prototypes in their paneled and turned ornamentation, that frequently the pieces can only be differentiated by a close examination of the wood of which they are constructed. Two generations later, when the Chippendale

and other styles were introduced, the principal differences between the New England product and the examples brought in from Old England lay in a greater degree of restraint in the carved ornamentation and perhaps a less heavy construction of the frame. The Windsor chair and the rocker may be considered developments of American craftsmanship but utilitarian rather than decorative in their form and construction.

One decorative form appearing in New England in the mid-eighteenth century, in the low chest of drawers, slant-top desk, secretary-desk and similar pieces of furniture, was the "block-front" cut from the solid wood. It seems to have originated in Newport, Rhode Island, passed into Connecticut and reached a high development in Philadelphia. By many it is considered one of the finest contributions to furniture design produced by the New England cabinetmakers and certainly it is not lacking in fine proportion nor in a dignified richness of design.

It would be fruitless to attempt here to elaborate upon the work of the New England cabinetmakers. The subject has been treated at length in numerous volumes containing a wealth of illustration.

The same is true of the work of the Colonial silversmiths. It has been carefully studied and beautifully illustrated and the student has at command much material upon which to base individual judgment. In general, the early silversmiths followed closely the London models and as a result the best examples of their workmanship compare most favorably with contemporary English work. There was much less wealth in the colonies, however, and therefore the additional cost of handwork, in an elaboration of decorative detail, usually resulted in a greater simplicity of design. The shapes, in general, followed the London fashion, and this was just as true in the time of Paul Revere as it was when John Coney impressed his mark with the symbol of a rabbit.

The craft of the pewterer does not seem to have been followed by many men in New England during the seventeenth century. The vessels were bringing shipments from London as demand required and, moreover, the bronze moulds used in making the ware were costly. Pewter was in use in nearly every household

until well into the nineteenth century and as time passed a pewterer was located in every large town. But neither the material nor its utility were well adapted to highly decorative forms and the established English patterns were repeated in New England until well toward its disappearance from domestic use. And this, of course, may be largely attributed to the very general use of imported moulds.

In the olden time the domestic arts were not entirely confined to pattern weaving and fine needlework. According to numerous advertisements in the Boston newspapers private schools existed for instruction in featherwork, filigree and painting on glass. Turkey-work for handkerchiefs was taught and also flourishing and plain embroidery. Young misses were instructed in crewel-work on pocket books, in drawing and working of twilights, and in making lace and in working tent stitch. In 1738, Mrs. Susannah Condry, near the Old North Meeting House in Boston, advertised "all sorts of beautiful Figures on canvas, for Tent Stitch: the Patterns from London, but drawn by her much cheaper than English drawing." Twenty years later, Eleanor McIlvaine, who lived opposite the Governor of the Province, advertised that she taught "Dresden painting on Glass, Shell work, Tent Stitch, and other works proper for young ladies." It will be noted that she was quite Victorian in her limitations for instruction. There were many who taught drawing, painting on glass and japanning—which was invented in France "for the amusement and benefit of the Ladies and now practiced by most of the Quality and Gentry in Great Britain," reads one advertisement. David Mason also did coats of arms and framed pictures.

Another domestic art was working in wax. In the old days this usually resulted in floral effects or representations of the human figure. Mrs. Abigail Hiller was one of those who gave instruction in this art. She also taught "painting upon glass, quill-work, feather work, filligree and transparent." At sometime before 1751 she had made a series of wax figures representing kings, queens, etc., which she exhibited at her house upon payment of six pence, lawful money, for men and women, and four

pence for children. In this manner of displaying her art she followed one John Dyer who advertised in 1733, "a very curious waxwork, being a lively representation of Margaret, Countess of Heininburg, who had 365 children at one birth, occasioned by the rash wish of a poor Beggar woman, who is represented asking for her charity."

Sculpture in stone existed in New England but only upon gravestones. Here, the representation of Father Time, the Death's head, bats, the serpent, the hourglass, and symbolic fruits and flowers was a fitting climax for a life devoted to the contemplation of death and the horrors of hell.

There were three generations of Lamsons, the first, a son of a farmer living in Ipswich, who cut gravestones in and about Boston. Joseph, of the first generation, was a gifted child, for he combined with his skill as a stonecutter the occupations of builder, mariner, cordwainer and surveyor, as appears from various entries in the public records. He cut the stone which marks the grave of the Reverend Michael Wigglesworth, the minister who was "Maulden's physician for soul and body Two," and the author of that much-read poem—"The Day of Doom." Lamson was paid only £2.10 to £3 for cutting and setting up a stone so one can see why he turned his hand, for a part of the time, to shoe-making and surveying.

There is a beautifully carved stone in Copp's Hill Burying Ground, Boston, which marks the grave of William Clark, the wealthy merchant who built the three-story mansion, already described, in which afterwards lived Sir Harry Frankland and Agnes Surriage. Its eulogistic epitaph is characteristic of the time and the excellent carving of coat of arms and festoons of fruits on either side, that at once attract attention, were cut by William Codner, the son of a cooper living in Cambridge. Much of his work may be traced in the graveyards of Boston and vicinity.

Henry Christian Geyer, a stonecutter, of German ancestry, advertised "Stones fit for all sorts of Architect work," as early as 1762 and the next year he had in stock "a large assortment of Slate-Stones, fit for hearths or graves." In 1767 he had increased

his business and could supply "some Frontice-Pieces work'd in with some of the compleatest mouldings of any in this Town." He sold "spout stones, gravestones, drean stones," and had fine marble slabs for tables.

"N. B. Said Geyer also makes Stone Coverts either of Marbel, Slate or Free Stones, which may be erected in any convenient place in a Gentleman's house, in order to preserve any Sort of Provision or Liquor from spoiling, and are very convenient for Gentlewomen to preserve their Milk, Cream and cold Victuals."

In 1768, Geyer began to make images of birds, cats, dogs, etc., in plaster of paris which were offered for sale in his shop opposite the South Fish Market, and two years later this branch of his business had increased so that he offered for sale busts of King George and Queen Charlotte, the King and Queen of Denmark and also Homer, Milton and Matthew Prior. He continued to cast birds and animals and advertised to supply in quantity to merchants, masters of vessels, country traders and shopkeepers.

This summary of the more outstanding creative work of the New England craftsmen is only intended to be suggestive. A study of original evidence and of the material that has been preserved until the present day will reveal much that is worthy of praise and also much that is merely curious. The line between the work of art and the antiquarian object is sometimes so obscurely drawn as to bewilder the ordinary observer. It is also very easy to arrive at pleasing conclusions when the will and the imagination have not been fortified by research.

NATHANIEL SMIBERT.—On Wednesday last [No. 3d] departed This Life after a short Illness, and last Evening was decently inter'd, Mr. NATHANIEL SMIBERT, in the 22nd Year of his Age. He was the second Son of the late Mr. *John Smibert*, Painter, in which Business he succeeded his Father, and bad fair to equal him in his justly admired Skill. The amiable Qualifications of this lately esteemed, and now, much lamented Youth, are more than can conveniently or prudently be mentioned on this Occasion. . . . His natural Ingenuity was remarkably promising, and though he had not the Advantage of an Academical Education, yet he had made such Progress in the dead and living Languages, and in many of the Arts and Sciences, as would be esteemed to deserve the Honours: . . . He had no Relish for the Scenes of high Mirth and Gaiety, but chose those Pastimes which improve the Thought and left an agreeable Reflection.—*Boston News-Letter*, Nov. 11, 1756.

NATHANAEL SMIBERT.—The following wrote to a Friend of the Person so justly celebrated, would have been made Public sooner, had the author permitted it: yet 'tis hoped the Merit and Memory of the Deceased, will sufficiently atone for its Appearance now.

MR. FOSTER, copper plate printer, died in Boston.—*Boston News-Letter*, Mar. 30, 1775.

On the fatal First of November, 1765, was published, a caricatura Print, representing the deplorable State of America, and under what Influence her Ruin is attempted. - - - At the Top is a Figure representing France, holding in one Hand a Purse of Money to a Comet, marked with a Jack-Boot, and out of her Mouth a Label, by which we find she actuates the Star to shed its baneful Influence on Britannia; who presents a Box to America, telling her it is the St---p A--t: but on it is wrote *Pandora's Box* (which, according to the Poets, was fill'd with all Kinds of Calamities. America, who is in deep Distress, calls out to Minerva to secure her, *for she abhors it as Death!* Minerva (i. e. Wisdom) forbids her taking it, and points to Liberty, who is expiring at the Feet of America with a Label proper to his Extremity. Close by is a fair Tree, inscribed to Liberty; at whose Root grows a Thistle, from under it creeps a Viper and infixes its Sting in the Side of Liberty.--Mercury (who signifies Commerce) reluctantly leaves America, as is expressed by the Label.—Boreas, near the Comet, blows a violent Gust full upon the Tree of Liberty; against which Loyalty leans, and expresses her Fear of losing her Support.—Behind, a Number of Ships haul'd up and to be sold; a Croud of Sailors dismiss'd, with Labels proper to them. On the other Side a Gallows, with this Inscription, *Fit Entertainment for St---p M--n*: A Number of these Gentlemen, with Labels expressing various Sentiments on the Occasion. At the Bottom is a Coat of Arms, proper for the St—p M—n.

The above to be Sold by *Nathaniel Hurd*, near the Town House.—*Boston Gazette*, Nov. 11, 1765.

THOMAS JOHNSON.—Mr. Thomas Johnson has just finish'd two of the Plates containing eight Bills, or manufactory Notes, to be forthwith emitted, by a number of Gentlemen in the County of

Essex, viz. of the Denominations of 1 *d.* 6 *d.* 9 *d.* 1 *s.* & 2 *s.* 3 *s.* and 5 *s.* The following is a Copy of a Bill of 9 *d.* to pass four-fold.

THE BANK BILL

No. NINE PENCE ()

We jointly and severally, for ourselves and Partners, promise to take this Bill as Nine Pence lawfull Silver Money at 6s. 8d. per Oz. in all Payments, Trade and Business, and for Stock in our Treasury at any time, and to pay the same at that Estimation on Demand to Mr. James Eveleth, or Order, in the Produce or Manufactories enumerated in our Scheme, as recorded in the County of Essex Records, for Value receiv'd, dated at Ipswich the 1st day of May, 1741. Motto, JUSTITIA REDIVIVA.—Boston Gazette, May 18/25, 1741.

THOMAS JOHNSTON.—Last Friday Morning died here Mr. Thomas Johnston, Japanner, Painter and Engraver, after a short illness, having been seized with an apoplectic fit a few Days before.—*Boston Evening Post*, May 11, 1767.

JAMES MARK, engraver, was convicted of counterfeiting the £4 bills of the Province of New York, and sentenced to be hanged. He had printed only thirteen bills when discovered. He afterwards was pardoned, on petition of “most of the Gentlemen of the City.”—*Boston News-Letter*, Sept. 7/14, 1713.

NATHANAEL MORSE, “an ingenious Engraver,” died in Boston, June 17, 1748. He left a widow Sarah.—*Boston Gazette*, June 21, 1748.

THOMAS ODELL, who counterfeited a Twenty shilling Bill of Credit of the Province of Massachusetts Bay, was apprehended in Pennsylvania, and taken to Rhode Island, where he escaped, was recaptured and brought to Boston, where he was fined £300, and ordered imprisoned for one year.—*Boston News-Letter*, Nov. 5/12, 1705.

PETER PELHAM.—*The following Observations should have been inserted in last Monday's Gazette, but came too late for the Press; yet I hope not too late to prevent the Growth of an Evil too dangerous to be overlookt by any Person who has either a Value for Religion, or Love for his Country.*

Passing by the Town-House on Saturday the 11th of this Month, a piece of Paper was slipt into my Hand, giving notice of an Entertainment of Musick and Dancing, (call'd by the fashionable name of an Assembly) to be held at Mr. *Pelhams* Dancing School on the Thursday following, &c. which Entertainment, as I am inform'd is to be repeated Monthly, for the benefit of Gentlemen and Ladies.

I could not read this Advertisement without being startled and concern'd at the Birth of so formidable a Monster in this part of the World; and I began to consider what could give encouragement to so Licentious and Expensive a Diversion, in a Town famous for its Decency and Good Order, and at a Time when Poverty is coming upon us like an armed Man; when our Trade is Daily Decreasing, and our Debts and Poor Multiplying upon us; does the Tranquility of our Affairs at Home, or the unusual Success of our Commerce, invite us to new Pleasures and Expenses?

When we look back upon the Transactions of our Fore-Fathers, and read the Wonderful Story of their godly Zeal, their pious Resolution, and their Publick Virtues; how should we blush and lament our present Corruption of Manners, and Decay of Religious & Civil Discipline? They laid the Foundation of their Country in Piety, and a Sanctity of Life: This was Building upon a Rock; and by the Blessing of GOD they flourish'd exceedingly, and became the astonishment and envy of their Neighbours: Magistrates then discharg'd their Duty with Diligence and Fidelity, and Vice and Irregularities were carefully watch'd, and crop'd in the Bud. Then were their Sons a Virtuous and Industrious Race, and their Daughters rich in a modest, frugal, and religious Education. But this their Posterity are too delicate to follow their sober Rules, and wise Maxims, and crying out for Musick, Balls and Assemblies, like Children for their Bells and Rattles; as if our Riches flow'd in so fast upon us, that we wanted ways to dispose of them: Whereas it is too well known how our Extravagance in Apparel, and Luxury at our Tables, are hastening the ruin of our Country, and are evils which call loudly for a Remedy.

MRS. TIMOTHY FITCH OF BOSTON

From a portrait by Joseph Blackburn, painted about 1763, in the Essex Institute.
Contemporaneous frame

In vain will our Legislature provide wholesome Laws to suppress this Epidemical profuseness. In vain will our Ministers preach Charity, Moderation and Humility, to an Audience, whose thoughts are engaged in Scenes of Splendour and Magnificence, and whose Time and Money are consumed in Dress and Dancing. In vain will Masters secure their Treasure (the fruit of long toil and Industry) with Locks and Bolts, while their Wives and Daughters are invited to Balls & Assemblies, where a great part of the pleasure consists in being gaz'd at, and applauded, for the richness of their Cloaths, and the elegance of this Fancy. This is laying a foundation for Pride, vain Emulation, Envy, & Prodigality.

Time was when our Maidens were the desire of all Countries that had any Dealings with; and tho' their Fortunes were small, yet their Minds were Humble: If we should now feed their Pride & Extravagance, without enlarging their Portions, we may perhaps dispose of them to some inconsiderate Lovers; but Woe be to the Men to whose Lot they fall! they will be a Moth in their Estates, and a Bane to their Happiness.

These & many more Mischiefs too tedious to mention, fatal to Modesty & Virtue, and Expensive to Families, will be the pernicious Consequence of Tollerating such Assemblies. And they are Mischiefs which demand a General Remedy, by the Interposition of Publick Authority: For what single Person tho' ever so Prudent or Stout-hearted, durst deny a beloved Wife, or favorite Daughter, the Liberty of a Pleasure indulged to all their Neighbours and Acquaintance? And if Madam & Miss are not suffered to shake their Heels Abroad, they will make the House & Family shake at Home.—*Boston Gazette*, Nov. 20, 1732.

PETER PELHAM.—At Mr. Pelham's House near the Town Dock is to be sold sundry sorts of Household Goods (for Cash) very Cheap, he having Intention to break up House-Keeping.

N. B. Attendance will be given from Eight till Twelve o'clock every morning, but not after that Hour on account of his preparing for his school in the Afternoon, which he continues to Keep as heretofore.—*Boston Gazette*, Apr. 5, 1734.

MR. PETER PELHAM, gives notice to all Gentlemen and Ladies in Town and Country, That at the House of Philip Dumerisque, Esq. in Summer Street (next his own Dwelling house) Young Gentlemen and Ladies, may be taught Dancing, Writing, Reading, Painting on Glass, and all sorts of Needle Work.—*Boston Gazette*, Jan. 16/23, 1738.

MR. PETER PELHAM gives notice to all Gentlemen and Ladies in Town and Country, That at the House of Philip Dumerisque Esq. in Summer street (next his own Dwelling house) Young Gentlemen and Ladies may be Taught Dancing, Writing, Reading, painting upon Glass, in all sorts of needle work.—*Boston Gazette*, Feb. 6, 1738.

PETER PELHAM gives Notice to all Gentlemen and Ladies in Town and Country, that he has removed his School to the House of Mr. John Powel in Leveret Lane near the Town House, Boston, where he teaches Dancing, Writing, &c. N. B. Youth may be Boarded or half Boarded.—*Boston Gazette*, May 1/8, 1738.

MR. PELHAM's Writing and Arithmetick School, near the Town House (during the Winter Season) will be open from Candle Light 'till Nine in the Evening, as usual, for the benefit of those employ'd in Business all the Day: and at his Dwelling House near the Quaker's Meeting in *Lindell's Row*: All Persons may be supply'd with the best *Virginia* Tobacco, cut, spun into the very best Pigtail, and all other sorts: also Snuff, at the cheapest Rates.—*Boston Gazette*, Sept. 20, 1748.

MR. PETER PELHAM desires all Gentlemen and Ladies may be informed, that he has open'd a Dancing-School at *Mr. Maverick's* in King-street, Boston: Due attendance will be given on Mondays, Thursdays and Saturdays in the afternoon, under such private and regular Orders as formerly kept by him, for the benefit of his Scholars. N. B., He may be spoke with any other Time at his House in *Lindall's* Buildings, or at his Writing-School behind the Stone Cutter's Yard, near the Town House.—*Boston Gazette*, Mar. 21, 1749.

H-df-n's SPEECH from the Pillory.

WHAT mean these Crouds, this Noise and Roar!
 Did ye ne'er see a *Regue* before?
 Are *Villains* then a Sight so rare,
 To make you prefs and gape and stare?
 Come forward all who look so fine,
 With Gain as illy got as mine:
 Step up—you'll soon reverse the Show;
 The *Croud* above, and *few* below.

Well—for my Roguery here I stand,
 A Spectacle to all the Land:
 High clav'd on this Stage,
 The *greatest Villain* of the Age.
 My Crimes have been both great and many,
 Equal'd by very few, if any:
 And for the *Milkmaids* I have done
 I put this *wooden Neckcloth* on.

There *HOW* his brawny Back is stripping,
 Quite callous grown with often whipping.
 In vain you wear your *Whip-Cord* out,
 You'll ne'er reclaim that *Regue* so stout.
 To make him honest, take my Word,
 You must apply a *bigger Cord*.

Now all ye who behold this Sight,
 That ye may get some profit by't,
 Keep always in your Mind, I pray,
 These few Words that I have to say.
 Follow my Steps and you may be
 In Time, perhaps, advanced like me;
 Or, like my fellow *Labourer HOW*,
 You'll get at least a *Pgill* below.

Sold by N. Hurd, near the Exchange, and at the *Heart and Crown* in *Cottingham*, *Bristol*.

CHARACTER BLANKS.—

Boston, Feb. 17th, 1730.

Whereas a laudable Custom hath of long Standing prevailed in this Province of recommending, in the Publick Papers, the Virtuous actions, blameless Lives, and christian Deportment of Deceas'd Persons, to the worthy Imitation of the Sorrowful Living: and as the same, (we hope) has been attended with a wish'd for Success, to the Instruction, and Edification of the surviving Generation. NOW in Order to render the same more extensively Effectual; and to soften the Labours of those pious Gentlemen who have hitherto Employ'd their Pens & precious Moments to so Excellent a Purpose: It is humbly propos'd, That the Endeavours of a Person, lately Arrived from Great Britain may merit Encouragement, The said Person having with the utmost Care, and best Assistances prepar'd a Set of Characters, suited to both Sexes, Engraven on Copper Plates, by the most skilful Hands, with Void spaces for Name, Age, Distinction, and Profession, or such Particular and Eminent Qualities, as do not properly fall under the Notice of General Description.

P. S. Such as desire further Information may Receive the same by Lodging a Letter to Mr. C. H., at the Crown Coffee House.—
Boston News-Letter, Feb. 18/25, 1730/1.

Boston, Mar. 1, 1730, 1.

To the Publisher of The Weekly Journal

Sir, Finding by an Advertisement in the *Weekly News-Letter*, that there hath lately arrived from the other side the Atlantick, a Famous Character-Drawer, who hath brought over a Fine Set there of curiously Engraven on Copper-Plates: and has therein Notified, That any one that stands in need of so useful a Creature, may receive the best of his assistance, by leaving a Line at the *Crown Coffee-House*, Directed to C. H. and least there should be any miscarriage, or failure in the Conveyance, I thought proper to put it in your paper, which will be the safest way, not only to gratify him with a sight of so reasonable Request, but may others, perhaps, with stirring them up to Emulation.

To Mr. C. H. at the Crown Coffee-House.

Sir, Reading the News-Paper some time since, and in Comply-

ance to your Desire, and the general Report of your Ingenuity, make me presume, and I hope without offence, to send you the following Lines.

Truly *Sir*, It cannot but Rejoyce the Hearts of the Inhabitants of *New-England*, to hear of the Famous Mr. C. H., the Great Characterizer, lately arrived from *Great Britain*; being the first of that Profession that ever Inhabited this Continent: among the rest, allow me to Rejoyce, in the hopeful expectation of having a considerable Trouble taken off my Hands, by so useful a one as yours. You have doubtless heard of the Melancholly News, of the sudden and awful Death of the Noted Cryer of this Town, *Cornelius George* by Name; as for his Character (notwithstanding the many I have given) I am intirely at a loss, therefore crave the favour of you, to supply me with one, for the best Advantage and greatest Honour of the Deceas'd; out of the famous Set, which you have Industriously Procured; where he was Born signifies but little; *New-England* was the last place of his Abode; he Dyed Aged, I know not how many years, he was a Cryer by Occupation, and a Son of the *Church of England* by Profession.

I am, *Sir*, yours, etc,—*New England Journal*, Mar. 8, 1731.

THE PETITION.

Artful Painter, by this Plan
 Draw a Female if you can.
 Paint her Features bold and gay,
 Casting Modesty away;
 Let her Art the Mode express,
 And fantastick be her Dress;
 Cock her up a little Hat
 Of various Colours, this and that;
 Make her Cap the Fashion new,
 An Inch of Gauze or Lace will do:
 Cut her Hair the shortest Dock:
 Nicely braid her Forehead Lock:
 Put her on a Negligee,
 A short Sack or Sheperdee
 Ruffled up to keep her warm,
 Eight or Ten upon an Arm;
 Let her Hoop extending wide
 Shew her Garters and her Pride,
 Her Stockings must be pure and white,

For they are seldom out of Sight.
 Let her have a high heel'd Shoe,
 And a glittering Buckle too;
 Other Trifles that you find,
 Make quite Careless as her Mind,
 Thus equipp'd she's charming Ware
 For the Races or the Fair.

HOUSE FRAME.—Stoughton, Mar. 14, 1728, On Monday last, the Rev. Mr. Dunbar, our beloved Pastor had Ninety Men at Work for him, who cut & hew'd all the Timber needful for the Building his House; which we hope will be a motive to other Towns.—*New England Journal*, Mar. 18, 1727/8.

OLD SOUTH MEETING HOUSE BOSTON.—On Friday the 28th of Feb. last was kept as a Day of Fasting & Prayer by the South Church & Congregation in this Town, upon occasion of taking down their Old Meeting-House, & Building a New One of Brick, which is to stand in the same Place. The last Lord's Day the Second of this Instant, was the last time of Meeting in their Old

House, which has stood for Three-score Years the last January, since twas raised. On the Monday, the Workmen took down the Windows, the Pews, the Pulpit, and the Seats both below and in the Galleries. On the Tuesday in the Forenoon, they took down the Belfrey, the Porches, the Stairs and the Galleries themselves. In the Afternoon they drew off the Boards at both Ends and laid it open : and about Five a Clock, They turned over the whole remaining Part of the Building at one Draught into the Yard on the North side; in doing which, it fell all to pieces. Yesterday they employed in removing the Fragments. And when we came to examin the main Timbers, it was surprizing to see that the Bottoms of the Great Rafters which upheld the Roof, together with the hinder Beams which bore up the Galleries were quite decay'd with Rottenness: and the Ends of all the Summers, for Six or Eight foot were in a great measure turn'd to Powder; that nothing but the Kings posts and the other Frame above has for a long time kept them from tumbling down upon the People. And it seems to be a wonderful Providence, that the last Lords day especially, when it was so much crowded, that the whole Congregation was not buried in a heap of Ruins. For my own part I had always in my mind some difficulties about the Taking Down : But accounted it my Duty to yield to the superior Judgment of the Church: But now, I am intirely satisfied, as is every one who comes and sees, that there has been the merciful hand of a watchful Providence in this Affair, which requires our humble adorations and acknowledgments. The tumultuous Noise indeed, in Taking down with the increasing Desolation, grew more and more affecting : But it was a very grateful thing to hear no Prophane, or unbecoming word, and to see no Hurt received, throwout the whole Proceeding.—The Praise of all to GOD.

The Old Church having given them the Liberty of Assembling in theirs, in the Intervals of their Publick Worship, the South Church & Congregation are to begin to meet There the next Lord's Day at 11 a'Clock in the Forenoon, and at 4 in the Afternoon.—*Boston News-Letter*, Feb. 27/Mar. 6, 1729.

As Witness my Hand, *Sarah Hunt*.—*Boston Gazette*, Dec. 22, 1747.

LINEN MANUFACTURE.—Publick Notice is hereby given, That sundry Looms for Weaving of Linnen, of all Sorts, are set up at the Linnen-Manufacture House in the Common below Thomas Hancocks' Esq; where all Persons may have their Yarn wove in the best and Cheapest Manner, and with the utmost Dispatch. At the same Place, money will be given for all Sorts of Linnen Yarn.

And whereas the setting up and establishing the Linnen Manufacture is undoubtedly of the utmost Importance to this Province: It is propos'd by a Number of Gentlemen, very soon to open

several Spinning-Schools in this Town, where children may be taught Gratis. And it is to be hop'd, that all Well-wishers to their Country will send their children, that are suitable for such Schools, to learn the useful and necessary Art of Spinning; and that they will give all other proper Countenance and Encouragement to this Undertaking.—*Boston News-Letter*, Dec. 13, 1750.

LINEN MANUFACTORY.—The Massachusetts General Court at its session held in the summer of 1753, passed an "Act for granting the sum of Fifteen Hundred Pounds To encourage the Manufacture of Linnen," providing for a tax on every "Coach, Chariot, Chaise, Calash and Chair" for the term of five years, the Governor, Lieutenant Governor, the President of Harvard College, and the settled ministers in the Province, being excepted from its provision, at the following rates: each Coach, ten shillings annually, Chariot, five shillings, Chaise, three shillings, Calash, two shillings, Chair, two shillings. The several sums received from Time to Time were to be paid to a committee of ten appointed by the Act, "to be applied to the purchasing a Piece of Land, and building or purchasing a convenient House within the Town of *Boston*, for carrying on the Business of Spinning, Weaving, and other necessary Parts of the Linnen Manufacture." This legislation was instituted because of "the great Decay of Trade and Business the Number of Poor is greatly increased, and the Burden of supporting them lies heavy on many of the Towns within this Province, and many Persons, especially Women and Children are destitute of Employment."—*Boston Gazette*, Aug. 7, 1753.

LINEN PRINTER AND DYER.—John Hickey, linen-printer and dyer, from Dublin, is now settled in this town, at the linen manufactory, where he follows the business of blue and white printing, and silk or cloth dying; and takes all manner of spots out of silk or cloths, cleans gold and silver lace, and scarlet cloth, dyes linnen and cotton of a blue or London red, and all manner of country stuffs, worsteds, camlets, tammies, or leather; he dyes blacks so as they shall be sound and clean as any other colour; also dyes ribbons and makes them up again as well as ever, and English thick sets after they have been worn or faded, and blue yarn for

one shilling a pound. N. B. as there has been several who have imposed upon this country in telling that they were printers; I engage myself that if my colours be not as good and as lasting as any that comes from Europe, to satisfy my employers with all charges or damages that shall be justly laid against me.

All the above articles done with expedition at the most reasonable price, by JOHN HICKEY.—*Boston Gazette*, May 7, 1759 (*sup.*).

LINEN PRINTER.—“*Extract of a Letter from Baltimore, January 16, 1772.* We learn that a person who has for many years past been a master in several large manufactories for linen, cotton and callicoe printing, likewise cutting and stamping of the copper plates for the same, intends some time this month to leave England for America, with six Journeymen, and all materials for carrying on the said business, previous to which, and unknown to the English manufacturers, he has shipped sundry machines, some of which will spin ten, and others from twenty to one hundred threads at one time, with the assistance of one hand to each machine.—These machines are not allowed at home, and so inveterate are the common people against them, that they burn and destroy not only them, but the houses wherein they are found. The Americans being able to purchase cotton to more advantage than the Europeans, a manufactory of this kind will doubtless be properly encouraged by the well-wishers to America.”—*Boston News-Letter*, Feb. 20, 1772.

MOVING PICTURES

THE ITALIAN MATCHMAN, or Moving Picture, wherein are to be seen, Wind-Mills and Water Mills moving round, Ships sayling on the Sea, and several curious Figures, very delightful to behold, to be daily shewn by Mr. *Nehemiah Partridge*, at his House in Water-Street, Boston, at the Head of Oliver's Dock, for Twelve Pence a Piece.—*Boston News-Letter*, Mar. 7/14, 1714/15.

PICTURE MACHINE.—Whereas there is lately arrived from Holland a certain Machine by which is presented to the sight a Prospect of Landships, beautiful Seats, Water Works, Alcoves, Groves, and Sea Pieces; a Curiosity most accurately done, and represented in such a beautiful Manner, as will attract the Minds of the ingenious, and delight the Fancy most agreeably.

Therefore this serves to advertise the Curious, and such as are disposed to view the said Machine consisting of fourteen distinct Pieces taken (from Things Real) That at the Dwelling House of Mr Hubbert the Carver in Common Street near the Granary in Boston.

Attendance will be given on Mondays, Wednesdays, and Fridays, from three a Clock to six in the Afternoon of the said Days weekly, each Person paying One Shilling and Six Pence for the View of the whole Set of Prospects.—*Boston Gazette*, Apr. 7/14, 1740.

ELECTRICAL EXPERIMENTS.—This is to give notice to the curious, that the Electrical Experiments with Methodical Lectures, exhibited last Winter near the Blue-Ball, are now exhibited in Orange-Street, a little below Concert-Hall, in the House where the Wax-Work is shewn: Price, One PISTARENE. By JOSEPH HILLER, *Jeweller*.

 All who would attend these LECTURES, are desired to improve every dry Evening for this purpose; because the Season for these Experiments will continue but a few Weeks: They are

also desired to send for Tickets in the Morning.—*Boston Gazette*, Feb. 23, 1756.

THE MICROCOSM.—To be Seen (for a short Time) at the House of Mr. *William Fletcher*, Merchant, *New-Boston*; That ELABORATE AND MATCHLESS PILE OF ART, Called, THE MICROCOSM, Or, The WORLD in MINIATURE.

Built in the Form of a Roman Temple, after Twenty-two Years, close Study and Application, by the late ingenious Mr. HENRY BRIDGES, of London; who, having received the Approbation and Applause of the Royal Society, &c. afterwards made considerable Additions and Improvements; so that the Whole, being now compleatly finished, is humbly offered to the Curious of this City, as a Performance which has been the Admiration of every Spectator, and proved itself by its singular Perfections the most instructive as well as entertaining Piece of Work in Europe.

A PIECE of such complicated Workmanship, and that affords such a Variety of Representations (*tho' all upon the most simple Principles*) can but very imperfectly be described in Words the best chosen; therefore 'tis desired, what little is said in this Advertisement may not pass for an Account of the MICROCOSM, but only what is thought merely necessary in the Title of such an Account, &c.

ITS outward Structure is a most beautiful Composition of Architecture, Sculpture and Painting. The inward Contents are as judiciously adapted to gratify the Ear, the Eye, and the Understanding; for it plays with great Exactness several fine Pieces of Musick, and exhibits, by an amazing Variety of moving Figures, Scenes diversified with natural Beauties, Operations of Art, of human Employments and Diversions, all passing as in real Life, &c.

I. SHEWS all the celestial Phænomena, with just Regard to the proportionable Magnitudes of their Bodies, the Figures of their Orbits, and the Periods of their Revolutions, with the Doctrine of JUPITER'S Satellites, of Eclipses, and of the Earth's annual and diurnal Motions, which are all rendered familiarly intelligible. In Particular will be seen the Trajectory and Type of a Comet, predicted by Sir ISAAC NEWTON, to appear the Beginning of 1758; likewise a Transit of VENUS over the Sun's Disk, the Sixth of

June 1761; also a large and visible Eclipse of the Sun, the First of *April 1764*, &c.

2. ARE the nine Muses playing in Concert on divers musical Instruments, as the Harp, Hautboy, BassViol, &c.

3. IS ORPHEUS in the Forest, playing on his Lyre, and beating exact Time to each Tune; who, by his exquisite Harmony, charms even the wild Beasts.

4. IS a Carpenter's Yard, wherein the various Branches of that Trade are most naturally represented, &c.

5. IS a delightful Grove, wherein are Birds flying, and in many other Motions warbling forth their melodious Notes, &c.

6. IS a fine Landskip, with a Prospect of the Sea, where Ships are sailing with a proportionable Motion according to their Distance. On the Land are Coaches, Carts and Chaises passing along, with their Wheels turning round as if on the Road, and altering their Positions as they ascend or descend a steep Hill; and nearer, on a River, is a Gun-powder-Mill at Work. On the same River are Swans swimming, fishing, and bending their Necks backwards to feather themselves; as also the Sporting of the Dog and Duck, &c.

7. AND lastly, IS shewn the whole Machine in Motion, when upwards of twelve Hundred Wheels and Pinnions are in Motion at once: And during the whole Performance it plays several fine Pieces of Musick on the Organ and other Instruments, both single and in Concert, in a very elegant Manner, &c.

IT will be shewn every Day, exactly at Eleven o'Clock in the Morning, and again at Three and Five in the Afternoon, at Four Shillings & Six Pence each, and Children under Twelve Years of Age, at Three Shillings (*Lawful Money*) though Price quite inferior to the Expence, and Merits of this Machine.

N. B. ANY Person subscribing *Thirteen Shillings and Six Pence*, will be entitled to see the MICROCOSM at the above Hours, during its Stay at *Boston*.

TICKETS to be had of Edes & Gill in Queen-Street, and at the above Mr. Fletcher's.—*Boston Gazette*, May 17, 1756.
